FUND OBJECTIVE

The objective of the Global Flexible Fund is to provide investors with long-term capital growth through investment in a diversified range of global asset classes and currencies. The fund aims to produce an equity-like return over the long term, but with less risk than equity markets; its broad mandate allows it to invest across asset classes and the capital structure in a variety of market caps, geographies and sectors. The Sub-Fund is actively managed and is not managed in reference to any benchmark.

INVESTOR PROFILE

The portfolio is suitable for investors seeking global exposure to developed financial markets as part of their overall investment strategy, with maximum capital appreciation as their primary goal, and who do not wish to make complex asset allocation decisions between equities, cash and bonds in global markets. Investors should have a high tolerance for short-term market volatility in order to achieve long-term objectives.

1) Performance net of fees. Performance is calculated for the portfolio and individual investment performance may differ as a result of initial fees, the actual investment, the actual investment date, the date of any reinvestment and dividend withholding tax. Data source Nedgroup Investments (IOM) Limited.

2) The on-going fee is a measure of the actual expenses incurred in the management of the Classes of the Sub-Fund. The on-going fee shown is expressed as a percentage of the monthly average value of the portfolio calculated over a 12-month period as at the date shown. The current on-going fee cannot be used as an indication of future on-going fees. A higher on-going fee does not necessarily imply a poor return, nor does a low on-going fee imply a good return.

Funds are generally medium to long-term investments. The value of your investment may go down as well as up. International investments may be subject to currency fluctuations due to exchange rate movements. Past performance is not necessarily a guide to future performance. Nedgroup Investments does not guarantee the performance of your investment and even if forecasts about the expected future performance are included you will carry the investment and market risk, which includes the possibility of losing capital.
