### Synthetic risk and reward profile

The Sub-Fund is ranked at 5 because variations in the price of its shares are typically high. This is not a measure of any risk of capital but rather a measure of the past fluctuations in the value of the Sub-Fund.

The risk category shown is not guaranteed and may shift over time. The indicator uses a standard calculation method that is used by all UCITS funds.

The risk category indicator is based on historical data and may not be a reliable indication of future risk profile.

The lowest Category 1 does not mean "risk free".

The following are risks materially relevant to the Sub-Fund which are not adequately captured by the indicator:

- Liquidity Risk – lower liquidity means there are insufficient buyers or sellers to allow the Sub-Fund to readily buy or sell investments.
- Investment Market Risk – the value of investments in the Sub-Fund are subject to a variety of factors affecting global stock markets.

- Operational Risk – the impact of breakdowns in systems, internal procedures and human error.
- Equity Risk - investments may be volatile and may fluctuate according to market conditions, the performance of individual companies and that of the broader equity market.
- Currency Risk- the value of the Sub-Fund may be affected by changes in currency exchange rates for those securities held in a non-base currency (USD).
- Derivative Risk – the Sub-Fund may use derivative instruments for hedging and for efficient portfolio management. This may result in gains or losses that are greater than the original amount invested. Derivatives may also be used to protect against potential risks. There is no guarantee that derivatives will provide the anticipated protection.
