## Portfolio attributes

### Investment objectives

- This rand denominated fund aims to provide an alternative to call accounts.
- Focus on maximising interest income, while protecting capital.
- Provides daily liquidity to investors by investing in short-term money market instruments.
- The investment mandate of the portfolio is stricter than a typical money market fund.

### Investment policy

- The fund invests in high quality short-term money market instruments.
- Maximum fund weighted average duration 90 days.
- Maximum instrument term to final maturity 13 months.
- Maximum fund weighted average term to maturity 120 days.
- Compliant with Regulation 29 and 30 of Medical Schemes Act.
- The fund provides diversification across counterparties with set maximum exposure <sup>6</sup>.

### Fund related risks

- For money market instruments, while unlikely, capital loss may occur due to an event like the default of an issuer.
- The fund typically displays low volatility, credit, liquidity and interest rate risk.

## Performance profile

### Rolling one year returns

### Periodic performance<sup>1</sup>

## ► About the fund manager

Taquanta Asset Management is one of the largest independent specialist cash and fixed income managers in South Africa and was formed as an independent group in 2007. Their fixed income team, consisting of former treasury professionals, possess skills that are clearly differentiated from generic cash and fixed income asset managers. The firm is amongst the top ranked cash managers in the country. The investment team at Taquanta has managed the Corporate Money Market Fund since its inception in 2012.

## ► Investment philosophy

The investment process is built on the premise of capital preservation.

The investment manager aims to unlock the liquidity risk premium embedded in money market assets.

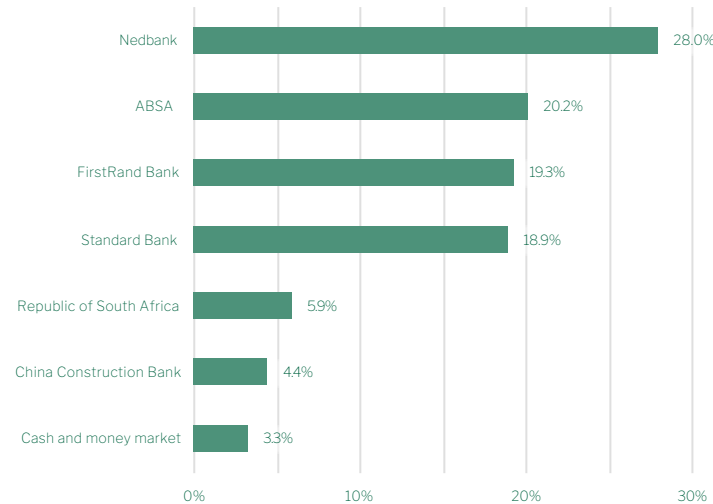

Taquanta use their experience to structure and invest in assets that will create yield enhancement for the fund.

Risk drivers are managed to achieve the fund's objective through various investment cycles.

<b>Gross estimated yield</b>	9.05%
<b>Modified duration (Years)</b>	0.20

### Definitions

- 1) The annualized total return is the average return earned by an investment each year over a given time period. Performance is calculated for the portfolio and individual investment performance may differ as a result of initial fees, the actual investment, the actual investment date, the date of reinvestment and dividend withholding tax. Due to the delayed release of inflation data, relevant benchmarks will lag by one month. Data source: © Morningstar Inc. All rights reserved.
- 2) Total Expense Ratio (TER), expressed as a percentage of the Fund class, relates to expenses incurred in the administration of the Fund class. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TERs. Transaction Costs (TC), expressed as a percentage of the Fund class, relate to the costs incurred in buying and selling the underlying assets of the Fund class. TC are a necessary cost in administering the Fund class and impact Fund class returns. It should not be considered in isolation as returns may be impacted by other factors over time including market returns, the type of Fund, the investment decisions of the investment manager and the TER. The Total Investment Charges expressed as a percentage of the Fund class, relates to all investment costs of the Fund class. Both the TER and TC of the Fund class are calculated on an annualised basis, beginning 2021-01-01 and ending 2023-12-31. Where the Fund class is less than 3 years old, the TER and Transaction Costs cannot be determined accurately because of the short life span of the Financial Product. Calculations are based on actual data where possible and best estimates where actual data is not available.
- 3) Weighted Average Maturity means the weighted average of the remaining life of each instrument held in a portfolio, meaning the time remaining until the principal value is repaid in full, disregarding interest and any discounts. This excludes those securities such as property that don't have a maturity date.
- 4) Gross Estimated Yield means the sum of all expected income from underlying instruments in the portfolio divided by the cumulative net asset value of the fund. The expected income amounts are approximate and based on market assumptions and forecasts. Actual returns may differ, based on changes in market values, interest rates and changes in costs actually experienced during the investment period.
- 5) Total Modified Duration measures how sensitive a bond's price is to a change in the interest rate level and follows the concept that interest rates and bond prices move in opposite directions. In other words, it estimates by how much, measured as '% change', you can expect a bond price to fall for every 1% increase in interest rates and vice versa. The weighted average modified duration collectively measures the total portfolio's sensitivity.
- 6) 25% maximum exposure to ABSA, FNB, Nedbank, Standard Bank. 10% maximum exposure to single international bank (minimum international rating of A-), combined maximum exposure 30%. 30% maximum exposure to RSA Government. Parastatal exposure only where guaranteed by RSA Government. Parastatal entities, municipalities, SOE's, non-bank corporates, and conduits prohibited.

## ► Disclaimer

Nedgroup Collective Investments (RF) Proprietary Limited is an authorised Collective Investment Scheme Manager and the representative of Nedgroup Investments Funds PLC in terms of the Collective Investment Schemes Control Act 45 of 2002. It is also a member of the Association of Savings & Investment South Africa (ASISA).

The Standard Bank of South Africa Limited is the registered trustee. Contact details: Standard Bank, Po Box 54, Cape Town 8000. Email: [Trustee-compliance@standardbank.co.za](mailto:Trustee-compliance@standardbank.co.za); Tel: 021 401 2002.

Collective Investments Schemes are generally medium to long term investments. The value of your investment may go down as well as up. Past performance is not necessarily a guide to future performance. Nedgroup Investments does not guarantee the performance of your investment and even if forecasts about the expected future performance are included you will carry the investment and market risk, which includes the possibility of losing capital.

Funds are valued daily at 15:00. Instructions must reach us before 14:00 (12:00 for money market funds) to ensure same day value. Prices are published daily on our website and in selected major newspapers.

A schedule of all fees, charges and maximum commissions is available on request.

Our funds are traded at ruling prices and can engage in borrowing and scrip lending. Some portfolios may hold foreign securities including foreign CIS funds. As a result, the fund may face material risks, which could include, foreign exchange risks, macro-economic risks and potential constraints on liquidity and the repatriation of funds, etc. Nedgroup Investments has the right to close funds to new investors in order to manage it more efficiently.

Our money market funds aim to maintain a constant price of 100 cents per unit. A money market fund is not a bank deposit. The total return to the investor is made up of interest received and any gain or loss made on any particular instrument held. In most cases the return will merely have the effect of increasing or decreasing the daily yield, but in an extreme case it can have the effect of a capital loss. Excessive withdrawals from the fund may place the fund under liquidity pressures and that in such circumstances a process of ring-fencing of withdrawal instructions and managed pay-outs over time may be followed. The yield is calculated using an annualised seven day rolling average as at the relevant dates provided for in the fund fact sheet.
